

MUSCLEBLAZE

Fitness App • UI/UX Case Study

A modern fitness experience designed around discovery, workouts, progress tracking and a simple shopping flow.

**PORTFOLIO
PROJECT**

Live prototype

<https://gorgeous-scone-a112fe.netlify.app/>

Designed as a portfolio-ready UI/UX concept with a dark, energetic visual direction and clear navigation.

01 Project Overview

MuscleBlaze is a fitness-focused digital product concept that brings workout discovery, tracking and shopping into one streamlined experience.

ROLE

UI/UX Designer
Product Design • Prototyping

PRODUCT

Fitness web/app concept
Workout + commerce experience

FOCUS

Navigation • Visual hierarchy
Interaction • Responsive thinking

PRIMARY USERS

People who want a simple place to explore workouts, monitor progress and access fitness products.

DESIGN GOAL

Make the core actions easy to discover while keeping the interface visually strong and fitness-oriented.

CORE AREAS

Shop • Workouts • Track • Cart •
Demo interaction

The live prototype currently exposes primary navigation for Shop, Workouts, Track and Cart, plus Play demo / Stop controls.

02 UX Strategy & User Flow

The experience is structured around a small set of high-frequency actions. Reducing navigation choices helps users move from intent to action with less friction.

Landing / Demo	Shop or Workouts	Track / Cart	Continue fitness journey

01 • CLARITY

Primary actions are surfaced in the top-level navigation so users can quickly understand what the product offers.

02 • CONSISTENCY

A focused visual language can be reused across workout, tracking and commerce surfaces.

03 • MOTIVATION

Fitness products benefit from energetic visual cues, progress-oriented content and strong calls to action.

03 Visual Design System

The interface direction uses contrast, restrained typography and strong spacing to create a premium fitness aesthetic.

COLOR DIRECTION	TYPE & HIERARCHY	COMPONENT LANGUAGE
Dark / near-black surfaces create depth. A warm accent can be used for key actions, highlights and active states.	Large, bold headings establish energy and identity. Short supporting copy keeps screens scannable.	Buttons, navigation items, cards and status elements should share consistent spacing, radius and interaction states.

Key interaction surfaces

SHOP	WORKOUTS	TRACK	CART
Product discovery and selection.	Workout discovery and action.	Progress-oriented experience.	Simple purchase flow.

04 Key Screens & Interaction Notes

The live prototype provides a clear base for documenting the primary product surfaces. The following screen set can be used as the case-study narrative.

01	LANDING / DEMO	Introduces the product identity and provides a direct entry into the interactive experience.
02	SHOP	Supports product discovery and a commerce-oriented journey without hiding the core fitness actions.
03	WORKOUTS	Creates a dedicated path for users whose immediate goal is exercise discovery.
04	TRACK	Provides a natural destination for progress and repeat engagement.
05	CART	Keeps selected products accessible through a familiar, low-friction action.

Portfolio note: add exported screenshots of each live screen beside these descriptions when presenting the case study in a design portfolio.

05 Outcome & Next Steps

MuscleBlaze demonstrates how a focused fitness product can combine strong visual identity with straightforward navigation and multiple user intents.

WHAT THE PROJECT SHOWS

- UI/UX layout and hierarchy
- Product navigation
- Fitness-oriented visual direction
- Interactive prototype thinking

NEXT ITERATION

- Add responsive mobile states
- Validate flows with usability testing
- Add workout detail and progress states
- Refine accessibility and empty/error states

MEASUREMENT IDEAS

- Task completion rate
- Navigation success
- Workout discovery time
- Cart conversion / drop-off

“Design the journey so the user always knows what to do next.”
